Subject: Peak Flow Monitoring Times

Below is the list of students with the potential for breathing difficulties in your classroom. I would like to develop a baseline for peak flow levels for these students. This takes about 2 weeks of twice daily readings. I could use your help to begin this process. The readings only take a few minutes.

Starting on Monday September 26 and continuing until Friday October 7, would you please send these students to me as soon as they arrive at school and again at the end of the day. If you forget first thing in the morning, we can see them anytime in the morning. For the afternoon reading, any time after lunch is fine with me.

Please let me know if this is a problem and we will rearrange times to better suit your schedule.

Thanks for your support!!
